

# Cloud Backup for Veeam

With Cloud Backup for Veeam, get VM backups and replicas off site without the cost and complexity of building and maintaining an off-site infrastructure. Cloud Backup for Veeam provides a fully integrated, fast, and secure way to backup, replicate, and restore from the cloud.

### Hosted offsite backups:

Get your backups off-site to a hosted cloud repository through a secure SSL connection with no additional Veeam licensing required.

### Complete visibility and control:

Access and recover data in hosted backup repositories directly from the backup console; track cloud repository consumption.

### Modern backup architecture:

Leverage Veeam’s modern backup technology, including backup copy jobs with built-in WAN acceleration, forever incremental backups, GFS (grandfather-father-son) retention policies and more - all built into one product.

### End-to-end encryption:

Rest easy by encrypting all data at source (before it leaves your network perimeter), in flight and at rest, without negatively impacting the data reduction ratios of built-in compression and WAN acceleration.

### Single infrastructure:

Avoid the need to maintain a secondary site and incur capital expenses in order to build and support additional infrastructure for off-site backup or DR.

### Pay as you go:

Get backups and replicas off-site with a pricing model that allows you to pay only for what you need.

## The 3-2-1 Rule

Following the 3-2-1 Rule has never been easier with Cloud Backup for Veeam from US Signal. The 3-2-1 Rule states that you need to keep three copies of your data, stored on two types of media with one copy being off-site. US Signal is the ONE, by providing an off-site storage location without the added capital expense of a secondary site.
