

virtual CISO as a service

Skip the headcount discussion, and go straight to keeping your business safe.

the vCISO fit

Not sure if a vCISO is right for your organization? If any of these challenges sound all too familiar, it could be exactly what you need...

- Difficulty Launching Security Strategy
- Too Many Security Tools
- Too Busy to Properly Execute
- Lack of Documented Procedures
- Mounting Compliance Mandates

.01 determine current state

Assess and document your current state based on regulatory requirements, solution portfolio, risk tolerance and corporate vision.

vision

.02 develop a security strategy

Review the current-state documentation and facilitate the development of an effective, rigorous and agile risk-based security methodology.

strategy

.03 establish an action plan

Based on the security strategy, establish a plan of action based on risk exposure, vertical, team dynamics, as well as a methodology for continual testing and improvement.

tactics

.04 determine the next steps

If remediation is deemed necessary, OneNeck security experts can help. Our security services include infrastructure and application security, identity an access management, advanced threat, security operations and additional security advisory services.
