Managed Detection Response & Vulnerability Management

Attackers do not keep business hours, and most IT teams cannot staff a security operations center around the clock. US Signal combines three managed security services into one layered defense: MDR protects your endpoints, MXDR extends detection and response across your entire environment, and Managed Vulnerability Management closes the gaps attackers target in the first place. All three are delivered by the same 24/7/365 US Signal Security Operations Center.

MDR

Managed Detection & Response

Stop threats at the endpoint before they spread.

- AI-driven behavioral detection stops malware & ransomware in real time.
- 24/7/365 monitoring and guided response from SOC analysts.
- Autonomous containment isolates compromised endpoints in seconds.
- Coverage for Windows, macOS, and Linux endpoints.
- Rapid rollout through your existing deployment tools.

MXDR

Managed Extended Detection & Reponse

Detects attacks across your entire environment.

- Extends detection beyond endpoints to servers, network, cloud, & identity.
- Collects and correlates logs to reveal where threats originate.
- Advanced analytics and threat intelligence surface complex attacks.
- SOC experts investigate, validate, & respond in real time.
- Full visibility into the attack timeline and root cause.

VMaaS

Managed Vulnerability Management

Find and fix weaknesses before attackers exploit them.

- World-class scanning tools deployed and managed for you.
- Vulnerabilities identified, classified, & prioritized by risk.
- Clear remediation guidance from SOC security experts.
- Weekly, monthly, or quarterly scanning cadence.
- Optional patching for Windows & third-party applications.

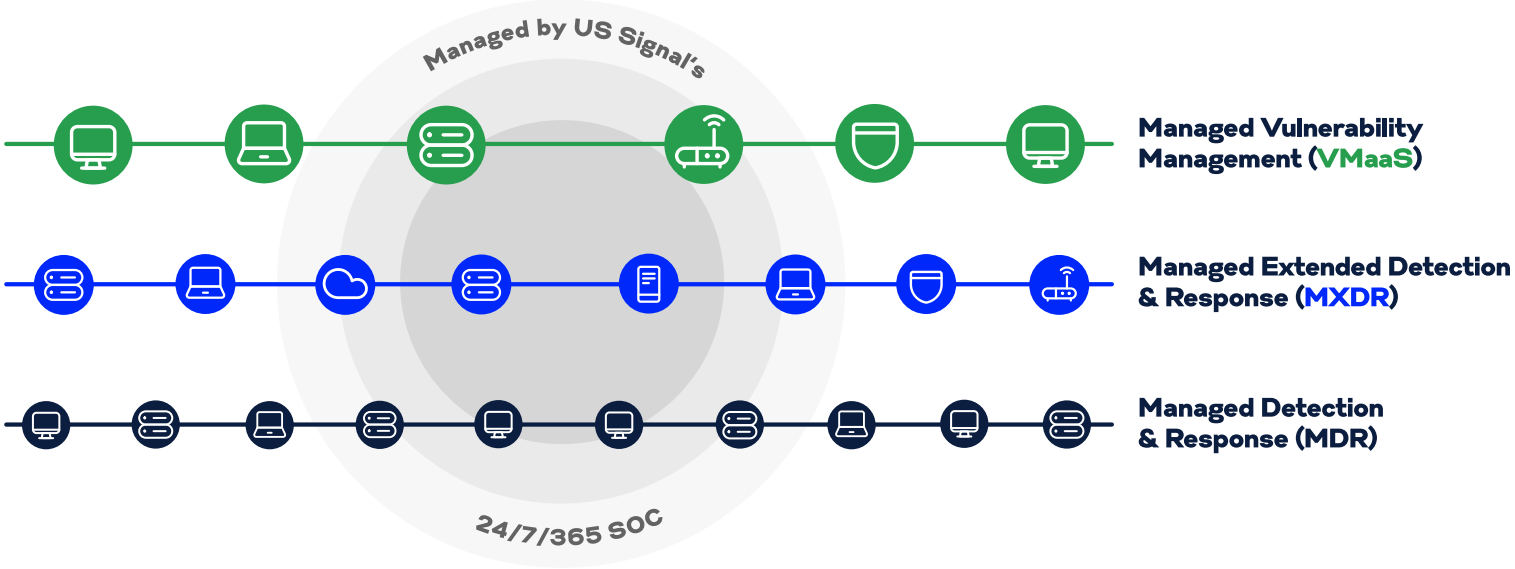

Stronger Together: Layered Security That Scales With You

Start with MDR to lock down endpoints. Extend visibility across servers, cloud, and identity with MXDR. Add Managed Vulnerability Management to shrink your attack surface proactively. One provider, one SOC, complete coverage.

Layered Security Coverage from US Signal

How US Signal manages all three products across your environment.

Why US Signal

24/7/365 US-Based SOC

Expert analysts monitor, investigate, and respond around the clock. Real people, not just alerts.

Compliance You Can Point To

Services built on audited infrastructure supporting PCI DSS, HIPAA, SOC 2, and ISO 27001 obligations.

Trusted Since 2001

A U.S.-based provider of cloud, colocation, connectivity, and managed services.

Customer-First Service

A named team that knows your environment and answers when you call.
